## II. Amendments to the Claims

In compliance with the Revised Amendment Format, the text of all claims under examination is submitted, and the status of each is identified. This listing of claims will replace all prior versions, and listings, of claims in the application.

### Listing of Claims

1. - 7. (Canceled)

8. (Previously presented) A labeled complex according to any one of claim 35 through claim 37, wherein said first and second labeled substances are selected from the group consisting of a fluorescent substance, a mineral phosphate, a luminescent substance and a chemiluminescent substance.

9. (Previously presented) A labeled complex according to claim 8, wherein the first and second labeled substances are luminescent and can be discriminated by a method selected from the group consisting of excitation wavelength, emission wavelength, emission intensity, degree of emission polarization, emission phase and emission lifetime.

10. (Previously presented) A labeled complex according to claim 9, wherein said carrier is bonded to the target receptor by an avidin, biotin bond.

11. (Previously presented) A labeled complex according to any one of claim 35 through claim 37, wherein said carrier is a magnetic particle, which can be controlled remotely.

12.- 34. (Canceled)

35. (Previously presented) A labeled complex, comprising:  
a carrier particle selected from the group consisting of a magnetic particle, charged particle, dielectric, chemotactic microorganism, synthetic resin bead, latex particle, glass bead, gel substance, and a metallic particle;  
a number of target receptors of length up to 1mm, each receptor having a first end and a second end, wherein the first end of each receptor is bonded with said carrier particle,  
wherein said target receptors are single-stranded nucleic acids of predetermined base sequence,  
and

PATENT / DOCKET NO. 10287.39

Customer No.: 000027683

wherein said target receptors bonded with a single carrier particle have the same or different base sequences;

and

at least a first type and a second type of labeled substance, each labeled substance bonded to a fraction of the number of target receptors at the second end of each receptor, thereby forming a labeled complex having a predetermined molar ratio of the types of labeled substances;

wherein the number and length of target receptors bonded to said carrier particle is such that a major influence by energy movement or quenching among the labeled substances does not occur, thereby enhancing discrimination by stable emission.

36. (Previously presented) A labeled complex, comprising:

a carrier particle selected from the group consisting of a magnetic particle, charged particle, dielectric, chemotactic microorganism, synthetic resin bead, latex particle, glass bead, gel substance, and a metallic particle;

a number of target receptors of length up to 1mm, wherein said target receptors are double stranded nucleic acids of predetermined base sequence, each double stranded nucleic acid having a first single strand and a second single strand, each single strand having a first and a second end, wherein the target receptor has a first end of a first single strand bonded with said carrier, and wherein said target receptors bonded with a single carrier particle have the same or different base sequences;

and

at least a first type and a second type of labeled substance, each labeled substance bonded to a fraction of the number of target receptors at the second end of a second single strand, thereby forming a labeled complex having a predetermined molar ratio of the types of labeled substances;

wherein the number and length of target receptors bonded to said carrier particle is such that a major influence by energy movement or quenching among the labeled substances does not occur, thereby enhancing discrimination by stable emission.

37. (Previously presented) A labeled complex, comprising:

a carrier particle selected from the group consisting of a magnetic particle, charged particle, dielectric, chemotactic microorganism, synthetic resin bead, latex particle, glass bead, gel substance, and a metallic particle;

a number of target receptors of length up to 1mm, wherein said target receptors are double stranded nucleic acids having a predetermined base sequence, each double stranded nucleic acid having a

Customer No.: 000027683

first single strand and a second single strand, each single strand having a first and a second end,  
wherein the target receptor has a second end of a first single strand bonded with said carrier,  
wherein said target receptors bonded with a single carrier particle have the same or different base  
sequences;

and

at least a first type and a second type of labeled substance, each labeled substance bonded to a fraction of  
the number of target receptors at the first end of a first single strand, thereby forming a labeled  
complex having a predetermined molar ratio of the types of labeled substances;  
wherein the number and length of target receptors bonded to said carrier particle is such that a major  
influence by energy movement or quenching among the labeled substances does not occur, thereby  
enhancing discrimination by stable emission.
